

TITLE

RAPID TEST FOR CELL SURFACE ANTIGEN

ABSTRACT OF THE DISCLOSURE

5 The present invention discloses a diagnostic kit for
assaying a cell presenting specific surface specific antigen,
comprising: a first complex, comprising a magnetic bead
coated with a first ligand specific to the specific cell
surface antigen; a second complex, comprising a second
10 ligand specific to the common cell surface antigen and a
signal generation means; and a magnetic support. The kit
can be used for the quantitative and qualitative analysis of
a cell sample containing specific cell surface antigen.
